15 250 Respondents 10 000 Households

The most complete measurement of reader audiences, across all platforms, to inform effective advertising investment

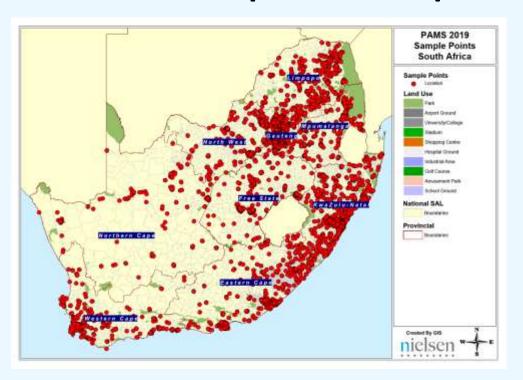

100% of municipalities sampled

PAMS 2019 coverage...

All 233

Municipalities sampled

First survey in SA media history to have income in the sample design

- Using The Neighbourhood Lifestyle Index (NLIMO), developed by GTI, the PAMS 2019 sample was disproportionately designed by income upper income areas were disproportionately oversampled, and lower income areas were disproportionately under sampled
- The NLIs are developed by using more variables, than only household income. Other variables used include e.g. Type of Dwelling and Household Size
- As income is one of the main variables, the groups are expressed in income intervals

NLI	Monthly HH Income	Proportionate %	PAMS 2019 %
1-3	R1 – R11 159	70	50
4-6	R11 160 – R39 941	21	30
7-10	R39 942 +	9	20

Measures digital usage across all platforms, and information about online behaviour

Fusion overview

Jonathon Wells
Senior Vice President Data Science
Nielsen Media International

What is Fusion?

Data Fusion is the process of integrating multiple data sources by using common variables to match two or more datasets at the respondent level and create one unified database.

Fusion reduces the cost and technical difficulties in capturing all the data of interest in a single-source survey.

Bringing separate media assets together for the most granular view of People's Behaviour across Media Platforms, and Product consumption.

A simple data fusion example

How many people watch the game and buy soft drinks?

Neither panel tells us this... but data fusion will!

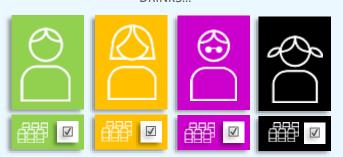

THREE PEOPLE METER RESPONDENTS WATCHED THE GAME...

FOUR PEOPLE METER RESPONDENTS DIDN'T WATCH THE GAME...

FOUR CPS RESPONDENTS BOUGHT THE SOFT DRINKS...

THREE CPS RESPONDENTS DIDN'T BUY THE SOFT DRINKS

WITH THE FUSION ...

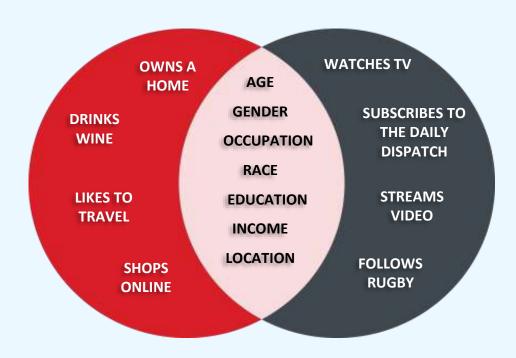

Some key terms

- Fusion
- Donor
- Recipient
- Hooks
 - Linking Variables
 - Matching Variables
- One to Many/Many to One

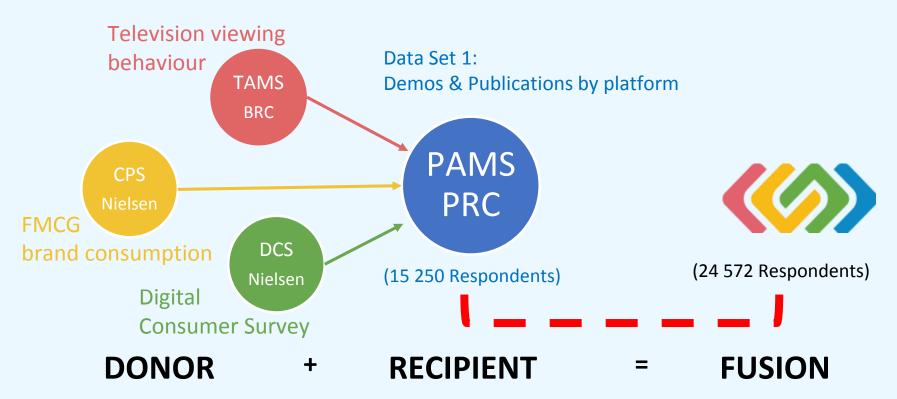

Fusion components

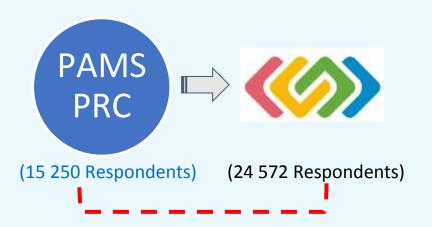

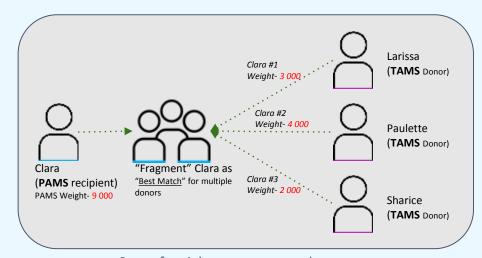

Why does the respondent count increase?

- To preserve currency measurement we must pass the complement of TAMS data on to the fused database
 - We need to match <u>every</u> TAMS donor to a PAMS recipient

 We need to "fragment" some recipients in order to make sure we use the <u>Best Match</u> for every donor

Sum of weights are preserved so **PAMS currency does not change**

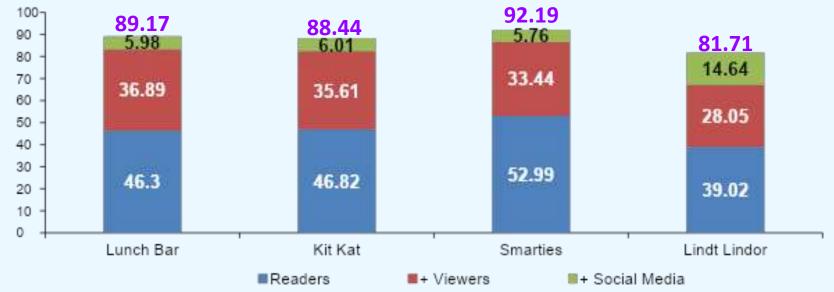

Fusion 2020 in action

The future of Fusion

NOW:

- Key for integrating disparate data sets
- A core feature in X-Platform measurement solutions in most of our markets

NEXT:

- Increased use of Machine Learning and Artificial Intelligence algorithms to enhance data integration
 - Automate core Fusion processes
 - Additional consideration of "longitudinal" data
 - o Predictive modelling

Summary

Survey-based measurement is still important

Relying solely on single source measurement is fraught with risk in an increasingly fragmented environment

Fusion is well established - both within and outside Nielsen - and continues to evolve

From Research to Planning

Peter Langschmidt

Lead Research Consultant Publisher Research Council

Fusion 2020 Survey – Automated Planning Tools

- The PRC and BRC fully understand the time pressures that planners and advertisers are now under. This has been exacerbated by Covid with "wait and see" quarterly campaigns now becoming the norm.
- So to save you time and effort we are setting up global cross-tabs, available to all users, in Telmar Survey Time and in Nielsen Clear Decisions.
- These range from target market identification, to ConsumerScopes, to "day in the life" and candidate media.

DCS: Using Different Media At the same Time

TAMS

TAMS: Television Viewing

To make life easier for users we have now put the source survey into the tree.

Please bear in mind the sample, methodology and universe of each study and use the most appropriate.

TV viewing is asked in PAMS, DCS and TAMS.

Obviously TAMS is far and away the best to use, and will link to your ratings.

Target Market Identification

Defining the target market is the foundation upon which all advertising and marketing is built.

A product or brand TM definition will give you a 8-15% better return than a demographically defined one.

However, in many cases agencies prefer SEMs, especially in terms of standardised targets and buying performance.

To make your life easier we are setting up a number of TM definition tools in the global own codes of Telmar and Clear Decisions.

New Fusions Q2 2021

Peter Langschmidt

Lead Research Consultant Publisher Research Council

FUSION PHASE 2. Surveys 5 and 6. Q2 2021

DIGITAL - IAB Narratiive Data

We have been working with Narratiive and the IAB for the past few months. The Nielsen data scientists have evaluated a July pilot extract. The project to fuse Narratiive data by daypart is ongoing and should be completed by Q2 2021.

MAMS (Mindsets & Attitudes)

A 1 000 sample based on the PAMS Online universe was conducted in October. The study encompasses over 100 Statements including Values, Motivations, Aspirations, Lifestyle, Health, Personality types, Shopping habits, Religion, Trust in media, Hobbies, Alcohol, Smoking and Drugs, and much more. The Insites Consulting report will be released to the industry in late November.

Thank You
